

Solution Implementation

Your specialized Partner for PPM

We at Capture offer a full range of services in the area of project and portfolio management (PPM), agile methods and related software tools, all designed to help your company achieve its full potential.

Implementing a new software in an organisation or upgrading and migrating presents several challenges. The entire operational architecture of the company needs to be aligned with a new system or new tools.

Common Challenges:

- Implementations taking too much time before the results become visible.
- Changing requirements in the course of the project.
- Goal of implementation not communicated to users.
- No prioritizing. All requirements are equally urgent.
- Standard functionalities not fully known: Causing issues whether to use standards or adapt the system to organizational needs.

Your benefits:

- Profit from Capture's experience in numerous successful PPM projects across all industries.
- Choose our standard implementation with out-of-the-box PPM functionalities, if you want to have a quick and easy start.
- Get a clear picture of upcoming roadmaps and releases for the platforms.

- Avoid upgrade and long-term maintenance efforts by using standards.
- Be sure that the solution fits your needs by regular releases of new functionalities.

A quick win for every organization on every platform: Our standard implementation approach in phases to achieve immediate success and improved PPM maturity by using out-of-the-box capabilities.

2. Phase (6-8 weeks)

3. Phase (6-8 weeks)

Included Functionalities:

- Demand Management
- Project Execution
- Team Collaboration
- Reporting

Included Functionalities:

- · Resource Management
- Time Tracking
- Financial Management

Included Functionalities:

- · Portfolio Management
- Integrations

How a typical phase looks like for an implementation in a SaaS environment:

Init sprint

- Communicate your vision.
- · Choose a platform.
- Mutually agree upon expectations, deliverables, and set interaction model and engagement schedule.

Plan & Deploy sprint

- Get a functional out-of-the-box platform training for the project team.
- · Use standard business processes.
- Define and mutually agree upon critical attributes and processes.
- Configure PPM tool (including hierarchy, object model, necessary attributes, and reporting outputs, choose OOTB reports).

Release & Adopt sprint

- · Build training materials.
- Onboard related roles and perform key user training.
- · Use administrator trainings.
- Enable senior managers.
- Iterative refinement of configuration model based on end user feedback.
- Review adoption metrics and make necessary corrections.
- · Build roadmap for future phases.

Additional services

- · Process design.
- User acceptance test support.
- Data mapping and migration support.
- End user training.
- Adoption support.
